MIXING & FEEDING DIRECTIONS

Mix at the rate of 16.5 to 40 pounds per ton of TMR to formulate a complete cattle ration between 9.9 to 24 g/t of Optaflexx®. Feed this mixed ration continuously as the sole ration for the last 28-42 days on feed to provide 90-430 mg of Optaflexx® per head daily to cattle being fed in confinement for slaughter. Following the mixing directions above, the consumption rate of should be 1/2 pound to provide 300 mg/head/day or 1/3 pound per head daily to provide 200 mg/head/day for 28 to 42 days allowing the feeder with a 14-day window to market cattle. This product is recommended for both steers and heifers but not recommended for the breeding herd. Consult your **PEET'S** Representative for ration balancing services to provide the optimum usage of grain and roughage. Not for animals intended for breeding. Feed continuously to cattle as sole ration for the last 28-42 days on feed.
